

Portable and Practical

Features include:

- 8.4" LCD displays up to 8 waveforms and corresponding numeric data
- Standard features are 3/5-lead ECG, non-invasive blood pressure, Mindray™ SpO₂, pulse rate, respiration, dualchannel temperature, lithium ion battery, and recorder
- Optional features are Masimo SET® SpO₂, dual-channel invasive blood pressure, and sidestream CO₂
- Choose from various display modes, including large font, trend and oxyCRG, depending on your patient's condition
- 96-hours of graphic and list trends for thorough review of historical data
- Recall of 70 alarm events and associated waveforms allows review of significant episodes
- 3-trace recorder prints real-time and historical data as needed
- Compact flash back-up comes standard in every unit
- Nurse call interface allows connection to most hospital call systems

The PM-8000 Express is a portable patient monitor that is compact and simple in design. This device offers a lot of functionality, yet maintains an uncomplicated interface. Its feature-set provides core parameters with some optional offerings such as CO₂ and invasive blood pressure measurement. Then, you determine the monitor's ultimate capability based on the environment of use and patient population.

The PM-8000Express is a practical solution, both at the bedside and in transport, due to its small size, high resolution display, and ability to perform efficient, reliable physiological monitoring.

Use Large Font Mode to maximize the visibility of critical parameter data.
